

DEPI Assignment

Assignment 9

- 1- Use this UI to create simple [Todo app](#)
- 2- Use [Provider](#) as state management to handle all app logic and state changes
- 3- Use Consumer to rebuild only the needed part of the screen (without setState)
- 4- Try to follow the MVC architecture for better project structure

Deadline: 18/2/2026

Assignment 10

- 1- Use the same project of [Todo app](#)
- 2- Use [BLoC/Cubit](#) as state management to handle all app logic and state changes
- 3- Use Bloc Builder to rebuild only the needed part of the screen (without setState)
- 4- Try to follow the MVC architecture for better project structure

Deadline: 19/2/2026

Important Notes

- Do not use map instead of class model to encapsulate item attributes
- Ensure to use listview/gridview builder constructor for lazy loading
- Do not prefer using ClipRRect widget
- Try to separate any custom widget in separate method/class widget then call it

Task Submission

- If you are using github, push your code and provide the repo link (each assignment in different commit)
- If not, upload the project on drive and provide the link, ensure you open the access
- For both ways, provide output screenshots for all screens.
- **Please submit only the pdf file included in it the screenshots and code link, do not submit them separately**
