

DEPI Assignment 8

Task:

- 1- Complete the home screen with the listview and the switcher between the two views ✓
- 2- Implement bottom navigation bar contains home, cart, and profile ✓
- 3- Implement the food details screen
 - Apply navigation between home screen and food details screen ✓
 - Pass food model to show full details of the clicked food item ✓
 - Complete the food model to conclude all food attributes showed ✓
- 4- Implement the cart screen, with counters, and calculating the correct total price

Important Notes

- Do not use map instead of class model to encapsulate food attribute ✓
- Ensure to use listview/gridview builder constructor for lazy loading ✓
- Do not prefer using ClipRRect widget ✓
- Try to separate any custom widget in separate method/class widget then call it ✓

Deadline: 12/2/2026

Task Submission

- If you are using github, push your code and provide the repo link
- If not, upload the project on drive and provide the link, ensure you open the access
- For both ways, provide output screenshots for the 3 screens.
